

Registry Management System (RMS)

Electronic Data Capture Made Easy

Configurable, User Friendly, Powerful, and Flexible

The BayaTree Registry Management System (RMS) is an advanced web based data management application used for capturing, managing, and reporting patient, donor, or outcomes data. BayaTree RMS has flexible design options and rules-based features allowing for the creation of Forms and Questionnaires without computer language programming expertise. The system includes audit trail and data management features that make it ideal for patient/donor registries, outcome registries, and marketing studies. BayaTree RMS is compliant with HIPAA and 21 CFR Part 11.

RMS is...

- Web Based
- Complaint
- Multi-Browser: IE, Firefox, Chrome, Safari
- Multi-OS: Windows and Linux
- Multi-DB: MS SQL, Oracle, Sybase, MySQL

RMS can...

- Improve electronic data capture efficiency
- Use a configurable work flow
- Be localized to multiple languages
- Minimize data entry errors
- Standardize the data collection process
- Manage all Registry DBs in one application
- Generate output for external submission

RMS offers...

- Creation of Forms and Questionnaires without computer programming expertise
- Auto-population of Forms and APIs for integration with any third party systems
- Separate Forms for Online Enrollment, Participant Portal, Questionnaires, Screening, etc.
- Powerful design features for creating Forms, Sections, Widgets, and Data Fields (Simple and Advanced)
- Rapid development and implementation of registry databases
- Flexible configuration options to meet the needs of your data collection processes
- Improved Data Quality
- Activity Logging, Tracking, and a complete Audit Trail
- Comprehensive Training, User Guide, and rapid response times for Technical Support
