

BayaTree eDEP

Data Extraction and Processing

BayaTree eDEP is a data extraction workflow solution that captures and processes information locked in paper-based documents. It parses the scanned image of a document, extracts data fields, and populates electronic forms. It is designed to transform streams of documents of any structure and complexity into business-ready data. The solution is both scalable and customizable. It helps organizations streamline their business workflows, eliminate redundant data entry, improve data quality, and reduce costs.

BayaTree eDEP wraps the extraction technology in an intuitive interface, equipping the user with an impressive set of tools. Information in fax, scan, and PDF documents is converted to digital data for reuse in business workflows. Organizations save costs by reducing manual processing and avoiding human error.

Features

- ✓ Automated data extraction from paper-based documents
- ✓ Population of electronic forms with extracted data
- ✓ Simple, Complex, and Multi-Page forms support
- ✓ Extracted data can be exported to XML, CSV, or Databases
- ✓ Based upon accurate OCR (machine printed text) and ICR (handwritten text) technologies
- ✓ Compare extracted data to original document and make changes
- ✓ Data recognition with automated content analysis
- ✓ Excellent technical support and professional services

Benefits

- ✓ Streamline workflows
- ✓ Automate data entry
- ✓ Increase accuracy and speed of forms processing
- ✓ Review/Edit Tool to compare original document with extracted data and make changes
- ✓ Populate electronic forms using business logic
- ✓ Reduce human errors
